Business Insights

Churn risk

A cohort of historically high-spending customers has gone 700+ days without ordering. Recommendation: launch a targeted win-back campaign for the top 15-20 at-risk customers identified via RFM analysis

Regional discounting

West region generates the highest sales (₹554,979) but has the lowest profit margin (35.76%) due to elevated average discount rates (6.3%). Recommendation: review discount approval thresholds in West.

Category profitability gap

Electronics ranks #2 in revenue but has the weakest profit margin (33.15%) among all categories — notably not driven by higher discounting, since discount rates are nearly uniform (6.1-6.3%) across categories. Recommendation: investigate unit costs and supplier pricing for Electronics.

Product-level flag

Mechanical Keyboard is a high-volume product (594 orders) with a below-average margin (29.85%). Recommendation: reassess pricing or cost structure for this SKU specifically

Customer concentration

The Consumer segment drives 68% of total revenue purely through order volume, not higher margins or order value. Recommendation: growth strategy should prioritize acquisition/volume, not segment-specific pricing changes
